ALIGNMENTS

The invention relates to a recombinant ZCCT1 protein (Zn finger and CCT domain protein) coding sequence comprising a nucleic acid that hybridises to the barley ZCCT1 cDNA appearing as ADS19577. The pateent also discloses the identification of to genes, vnr1 identified as API (APETALA1) and vrn2 identified as ZCCT1 controlling vernalisation of flowering in temperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes New recombinant ZCCT1 protein coding sequence useful for altering a plant's (e.g., wheat, barley, rye, oats, or forage grasses) response to vernalization or flowering times. One grained wheat; chromosome 5a; 88; APETALA1; AP1; vernalisation; flowering; ZCCT1; ZCCT2; vrn1; vrn2; CArG box; plant; gene. Claim 1; SEQ ID NO 75; 115pp; English. have been localised to chromosome 5a of one grained wheat, Triticum monococcum. ZCCT1 is the repressor of API whose promoter contains a binding site for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant ZCCT1 protein coding sequence above (or a genetic construct that inhibits ZCCT1 repression of API), a seed from the transgenic plant, a method for altering a plant's response to vernalisation and a molecular marker for Vrn2 derived from ADS19577. The genetic construct is an interference RNA construct (RNA) that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense a repression defective ZCCT1 protein operably linked to a promoter or a nucleic acid sequence encoding a DNA binding defective ZCCT1 protein sednence 8X999999999999998888

New recombinant ZCCT1 protein coding sequence useful for altering a plant's (e.g., wheat, barley, rye, oats, or forage grasses) response vernalization or flowering times.

Disclosure; SEQ ID NO 79; 115pp; English.

The invention relates to a recombinant ZCCT1 protein (Zn finger and CCT domain protein) coding sequence comprising a nucleic acid that hybridises to the barley ZCCT1 cDNA appearing as ADS19577. The patent also discloses the identification of to genes, vini identified as API (APETALAI) and control identified as ZCCT1 controlling vernalisation of flowering in the identified as ZCCT1 controlling vernalisation of flowering in composerses. ZCCT1 also has a duplicate gene ZCCT2, all three genes contains a consoccum. ZCCT1 is the repressor of API whose promoter contains a comprising the for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant ZCCT1 protein coding sequence above (or a genetic construct that inhibits accT1 repression of API), a seed from the transgenic plant, a method for altering a plant's response to vernalisation and a molecular marker for vrn2 derived from ADS19577. The genetic construct is an interference RNA construct (RNAI) that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity a nucleic acid sequence encoding a DNA binding defective ZCCT1 protein

The invention relates to a recombinant ZCCT1 protein (Zn finger and CCT domain protein) coding sequence comprising an nucleic acid that hybridises to the barley ZCCT1 cDNA appearing as ADS19577. The patent also discloses the identification of to genes, viril identified as API (APETALA) and viril identified as ZCCT1 controlling vernalisation of flowering in temperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes have been localised to chromosome 5a of one grained wheat, Triticum monococcum. ZCCT1 is the repressor of API whose promoter contains a binding site for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant CC ZCCT1 protein coding sequence above (or a genetic construct that inhibits ZCCT1 protein and a molecular marker for altering a plant 's response to vernalisation and a molecular marker for altering a plant inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 protein operably linked to a promoter or a nucleic acid sequence encoding a DNA binding defective ZCCT1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4582 GIGCCAFITICACGGAGGIGCATICACCAACACTATIAGCAATGAAGCAATCATGACTATT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant ZCCT1 protein coding sequence useful for altering a plant's (e.g., wheat, barley, rye, oats, or forage grasses) response vernalization or flowering times.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GTGCCATTTCACGGAGGTGCATTCACCAACACTATTAGCAATGAAGCAATCATGACTATT

CC The invention relates to a recombinant ZCCT1 protein (Zn finger and CCT domain protein) coding sequence comprising a nucleic acid that hybridises CC to the barley ZCCT1 CDNA appearing as ADS19577. The patent also discloses the identification of to genes, vrnl identified as API (APETALA) and cvrl identified as ZCCT1 controlling vernalisation of flowering in a temperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes CC temperate grasses. ZCCT1 also has a duplicate grained wheat, Triticum monococcum. ZCCT1 is the repressor of API whose promoter contains a binding site for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant CC ZCCT1 protein coding sequence above (or a genetic construct that inhibits CCT1 protein and a molecular marker for altering a plant's response to vernalisation and a molecular marker for vinz derived from ADS19577. The genetic construct is an interference RNA construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 protein operably linked to a promoter or a nucleic acid sequence encoding a DNA binding defective ZCCT1 protein connective is a plant ZCCT1 genomic DNA semience.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAAGCCATGGCGTCGCCATCATCTCCCAGCTTCGCCCTATGATCCTAGTAAACTTCACCTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      to the barley ZCCT1 cDNA appearing as ADS19577. The patent also discloses to the barley ZCCT1 cDNA appearing as ADS19577. The patent also discloses to the barley ZCCT1 cDNA appearing as ADS19577. The patent also discloses to the dentification of to genes, vrn1 identified as APT (APPTALA1) and tremperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes have been localised to chromosome 5a of one grained wheat, Triticum moncoccum. ZCCT1 is the repressor of API whose promoter contains a binding site for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the vector, a transgenic plant comprising the vector compined as a comprising the vector, a transgenic plant of appearing a plant's response to vernalisation and a molecular marker for altering a plant's response to vernalisation and a molecular marker for vernalisation and a molecular marker for altering a plant's response to vernalisation and a molecular marker for vernalisation that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and comprises an antisense and a plant in this inhibits ZCCT1 activity and comprise and a molecular marker for construct that inhibits ZCCT1 activity and comprise and antisense and antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   invention relates to a recombinant ZCCTl protein (In finger and CCT ain protein) coding sequence comprising a nucleic acid that hybridises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        168

Winter barley ZCCT-Ha cDNA 30-DEC-2004 (first entry)

11-APR-2003; 2003US-00412137.

26-NOV-2003; 14-OCT-2004

US2004205848-A1. Hordeum vulgare.

```
mean occur. ZCCT1 is the repressor of AP1 whose promoter contains a binding site for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant ZCCT1. Protein coding sequence above (or a genetic construct that inhibits ZCCT1 repression of AP1), a seed from the transgenic plant, a method for altering a plant fs response to vernalisation and a molecular marker for Vrn2 derived from AD519577. The genetic construct is an interference RNA construct (RNA) that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity, a nucleic acid sequence encoding a repression defective ZCCT1 protein operably linked to a promoter or a nucleic acid sequence encoding a DNA binding defective ZCCT1 protein operably linked to a promoter. The present sequence is a plant ZCCT cDNA
temperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes have been localised to chromosome 5a of one grained wheat, Triticum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              228
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        288

The invention relates to a recombinant ZCCT1 protein (Zn finger and CCT domain protein) coding sequence comprising an nucleic acid that hybridises to the barley ZCCT1 cDNA appearing as ADS19577. The patent also discloses the identification of to genes, vanl identified as API (APBTALA1) and vanz identified as ZCCT1 also has a duplicate gene ZCCT2, all three genes remperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes have been localised to chromosome Sa of one grained wheat, Triticum monococcum. ZCCT1 is the repressor of API whose promoter contains a monococcum. ZCCT1 is the repressor of API whose promoter contains a comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant ZCCT1 protein coding sequence above (or a genetic construct that inhibits ZCCT1 repression of API), a seed from the transgenic plant, a method for altering a plant's response to vernalisation and a molecular marker for vrn derived from ADS19577. The genetic construct is an interference RNA construct (RNA) that inhibits ZCCT1 activity, a nucleic acid sequence encoding a CCT1 protein concerned as a plant ZCCT1 protein operably linked to a promoter. The present sequence is a plant ZCCT cDNA

The invention relates to a recombinant ZCCTl protein (Zn finger and CCT domain protein) coding sequence comprising a nucleic acid that hybridises to the barley ZCCTl pDNA appearing as ADS19577. The patent also discloses the identification of to genes, vrnl identified as API (APETALA1) and vrn2 identified as ZCCTl controlling vernalisation of flowering in temperate grasses. ZCCTl also has a duplicate gene ZCCT2, all three genes
                                                                                                                                                                                                                                                                                                                                        protein coding sequi

ADS19584

One grained wheat; chromosome 5a; 8s; APETALA1; AP1; vernalisation; flowering; ZCCT1; ZCCT2; vrn1; vrn2; CArG box; plant; gene.

sequence useful for altering a Disclosure; SEQ ID NO 82; 115pp; English. ADS19586

have been localised to chromosome 5a of one grained wheat, Triticum monococcum. ZCCT1 is the repressor of API whose promoter contains a binding site for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the recombinant ZCCT1 protein coding sequence above (or a genetic construct that inhibits ZCCT1 protein coding sequence above (or a genetic construct that inhibits ZCCT1 repression of API), a seed from the transgenic plant, a method for altering a plant's response to vernalisation and a molecular marker for Vrn2 derived from ADS19577. The genetic construct is an interference RNA construct (RNA1) that inhibits ZCCT1 activity and comprises an antisense a repression defective ZCCT1 activity, a nucleic acid sequence encoding a repression defective ZCCT1 protein operably linked to a promoter or a nucleic acid sequence encoding operably linked to a promoter. The present sequence is a plant ZCCT CDNA 169 ATTCACCATCATCATCACCATCATCAGGAGCACCAGCTGTGTGAGTACCAGTTCTTCGCC CATGGCAACCACCACCACCACCATGGCTCGGCAGCAGCTACCCAGTGCCACCGCCG 232 GGGAACAGCAGCAGAACTCACGCTGGAGGTAGATGCAGGCGGCCAAAACATGGCTCACCTG 292 cricciscicicides accese canda a contra c CATTATCCCACAATGCAGGAGAGCAGCGAAGGTGATGAGGTATAGGGAGAAGAGGAAG AGGCGCCCTATGACAAGCAAATCCGATACGAGTCCAGAAAAGCTTACGCTGAGCTTCGG CCATGGGTCAACGGCCGCTTTGTCAAGGTACCCGAAGCCATGGCATCGCCATCATCTCCCA 109 ATGTCCATGTCATGCGGTTTTGTGCGGCGCCAACAACTGCCCGGGCCTCATGGTCTCGCCC GGGAACAGCAGCAGCTCACGCTGGAGGTGGGCGCAGGCGGCCAACACATGCCTCACCTA <u> agcactartragcaargacaacaarcargacrarrgaracagaagargarggragggcracc</u> TCGGCCATTGCCACCACCAGCAGATCATGGACCACCACCGTTTCATGAAACAGCAGCTGCA GTGCAGCCACCGG-----CAAGAGCCCACATCGTGCCATTTCACGGAGGTGCATTCACC 15; Length 639; Sequence 639 BP; 162 A; 197 C; 171 G; 109 T; 0 U; 0 Other; Indels GCTTCGCCCTATGATCCTAGTAAACTTCACCTCGGATGGTTCCGGTA GCTTCGCCCTATGATCCTAGTAAACTTCACCTCGGATGGTTCCAGTA Score 445; DB 13; 1 Pred. The patent also discloses the identification of to genes, vrnl identified as ADI (APETALAI) and vrn2 identified as ZCCTI controlling vernalisation of flowering in have been localised to chromosome Sa of one grained wheat, Triticum monococcum. ZCCTI is the repressor of ADI whose promoter contains a binding alte for ZCCTI termed the CAKE Dox. Also included are a vector comprising the recombinant ZCCTI protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant
                                                                                                                                                                                                                                                                         -----trcatcaagtaaataagttgttattgtccga

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a recombinant ZCCTI protein (Zn finger and CCT domain protein) coding sequence comprising a nucleic acid that hybridises to the barley ZCCTI cDNA appearing as ABS19577. The patent also discloses the identification of to genes, vani identified as API (APPTALAI) and vani identified as API (APPTALAI) and vani identified as ZCCTI also has a duplicate gene ZCCT2, all three genes have been localised to chromosome a of one grained wheat, Triticum monococcum. ZCCT1 is the repressor of API whose promoter contains a monococcum. ZCCT1 is the repressor of API whose promoter contains a binding site for ZCCT1 termed the CATG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the recombinant accomplisation of API), a seed from the transgenic plant, a method for altering a plant's response to vernalisation and a molecular marker for virz derived from ADS19577. The genetic construct is a nitherference RNA construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity and sequence encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2704
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2764
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2824

ZCCT1 protein coding sequence above (or a genetic construct that inhibits ZCCT1 repression of API), a seed from the transgenic plant, a method for altering a plant's response to vernalisation and a molecular marker for Vrn2 derived from ADS19577. The genetic construct is an interference RNA construct (RNA) that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity, a nucleic acid sequence encoding a repression defective ZCCT1 protein operably linked to a promoter or a nucleic acid sequence encoding a plant sequence is a plant zccT genomic DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                   615

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2034
                                                                                                                                                                                                                                                                                                                                                              The invention relates to a recombinant ZCCT1 protein (Zn finger and CCT domain protein) coding sequence comprising a nucleic acid that hybridises to the barley ZCCT1 CDNA appearing as ABS19577. The patent also discloses the identification of to appearing as ABS19577. The patent also discloses vrn2 identified as ZCCT1 controlling vernalisation of flowering in temperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes have been localised to chromosome Sa of one grained wheat. Triticum monococcum. ZCCT1 is the repressor of AP1 whose promoter contains a binding site for ZCCT1 termed the CArG box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell zCCT1 repression of AP1), a seed from the transgenic plant, a method for a genetic construct that inhibits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        675
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               615
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       495
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                altering a plant's response to vernalisation and a molecular marker for Vrn2 derived from ADS19577. The genetic construct is an interference RNA construct (RNA) that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity, a nucleic acid sequence encoding a repression defective ZCCT1 protein operably linked to a promoter or a nucleic acid sequence encoding a nucleic acid sequence encoding a DNA binding defective ZCCT1 protein

                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a recombinant ZCCT1 protein (In finger and CCT domain protein) coding sequence comprising a nucleic acid that hybridises to the barley ZCCT1 cDNA appearing as ADS1957. The patent also discloses the identification of to genes, vunl identified as API (APETALA) and vunl identified as ZCCT1 controlling vernalisation of flowering in temperate grasses. ZCCT1 also has a duplicate gene ZCCT2, all three genes have been localised to chromosome Sa of one grained wheat, Triticum monococcum. ZCCT1 termed the CAPC box. Also included are a vector comprising the recombinant ZCCT1 protein coding sequence above, a cell comprising the vector, a transgenic plant comprising the vector a transgenic plant comprising the vector. Transgenic plant comprising the vector a transgenic plant comprising the vector. Transgenic plant transgenic plant inhibits ZCCT1 protein coding sequence above (or a genetic construct that inhibits ZCCT1 repression of API), a seed from the transgenic plant, a method for altering a plant's response to vernalisation and a molecular marker for Vrn2 derived from ADS19577. The genetic construct is an interference RNA construct that inhibits ZCCT1 activity and comprises an antisense construct that inhibits ZCCT1 activity, a nucleic acid sequence encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         291

The invention is useful for delaying flowering of a plant, which comprises expressing the novel DNA within the cells of a plant, such as rice. The Lhd4 protein enables control of flowering time of a plant, such as rice, thus causing efficient development and growth of an excellent variety. The present sequence is an Oryza sativa CDNA sequence which is claimed in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel DNA, designated Lhd4 and encoding a protein capable of delaying flowering in a plant. The invention is useful for delaying flowering of a plant, which comprises expressing the novel DNA within the cells of a plant, such as rice. The Lhd4 protein enables control of flowering time of a plant, such as rice, thus causing efficient development and growth of an excellent variety. The present sequence is an Oryza sativa CDNA sequence which is claimed in the

The invention is useful for delaying flowering of a plant, which comprises expressing the novel DNA within the cells of a plant, such as rice. The Lhd4 protein enables control of flowering time of a plant, such as rice, thus causing sequence is that of an growth of an excellent variety. The present exemplification of the invention.

Patent No. 6812339
GENERAL INFORMATION:
PEPPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REPRENCES: CLOODI307
CURRENT APPLICATION NUMBER: US/09/949,016
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16619 CACCACCACCACCATCATCATTGCCACCATCATCACCATCACCATCACCACCATGC 16560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         172 CACCATCATCATCACCATCACAGGAGCACCAGCTGTGTGAGTACCAGTTCTTGGCCCAT 231
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    232 GGCAACCACCACCACCACCATGGCTCGGCAGCAGACTACCCAGTGCCACCGCCGCCA 291
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             59; Indels
